

Muhammad Abu Bakkar Aslam

Aspiring AI/ML Engineer

Nadirabad Lahore, Pakistan | ✉ mabubakaraslam0@gmail.com | +92-309-2236124 | [Portfolio](#) |  [GitHub](#) |  [LinkedIn](#)

PROFILE

BSIT graduate with hands-on Python and machine learning experience gained through end-to-end projects covering classification, model comparison, and IoT automation via APIs. Skilled in data processing, exploratory data analysis, and evaluating models using industry-standard metrics, with practical experience using Git/GitHub for version control. Strong problem-solver eager to apply and expand this foundation into Generative AI, LLMs, AI agents, and RAG-based systems.

EDUCATION

Bachelor of Science in Information Technology
Lahore Garrison University

2022 – 2026
Lahore, Pakistan

Intermediate (FSc)
Garrison College for Boys Lahore Cantt

2019 – 2021
Lahore, Pakistan

TECHNICAL SKILL

Machine Learning:

Machine Learning, Supervised Learning, Classification, Regression, Clustering, Model Training, Model Evaluation, Feature Engineering, Feature Extraction, Data Preprocessing, Model Optimization, Predictive Modeling

Deep Learning:

TensorFlow, Deep Learning, Neural Network Fundamentals, Text Classification using Deep Learning

Libraries & Frameworks:

Pandas, NumPy, Scikit-learn, TensorFlow, Matplotlib, Seaborn, Plotly

Tools:

Jupyter Notebook, Anaconda, Git & GitHub, VS Code

PROJECTS

Heart-Disease-Prediction *Python, Pandas, NumPy, Plotly, Seaborn, Scikit-Learn*

GitHub Link: <https://github.com/AbubakkarAslam/Heart-Disease-Prediction>

- Developed a heart disease prediction model using 14 clinical features.
- Performed data pre-processing, EDA, and feature analysis.
- Implemented and compared multiple machine learning classification algorithms.
- Evaluated model performance using classification metrics.

Titanic Survival Prediction *Python, Pandas, NumPy, Scikit-Learn, Seaborn*

GitHub: <https://github.com/AbubakkarAslam/Titanic-Dataset-Analysis>

- Developed classification models to predict passenger survival.
- Performed missing value handling, feature encoding, and feature selection.
- Implemented Logistic Regression, Decision Tree, Random Forest, and Naive Bayes.
- Evaluated models using Accuracy, Precision, Recall, F1 Score, and Confusion Matrix

Smart Protective Socket (Final Year Project) - *ESP32, Sensors, Relay, Blynk IoT*

- Designed an IoT-based electrical safety device to detect human contact with live current.
- Integrated ESP32 microcontroller, sensors, relay module, and Blynk IoT platform.
- Developed automatic power cutoff mechanism and emergency notification system.
- Focused on preventing electrical accidents and improving household safety.
